# PrintAnyWay<sup>core</sup>

digital transformation / print management solution (AAA)
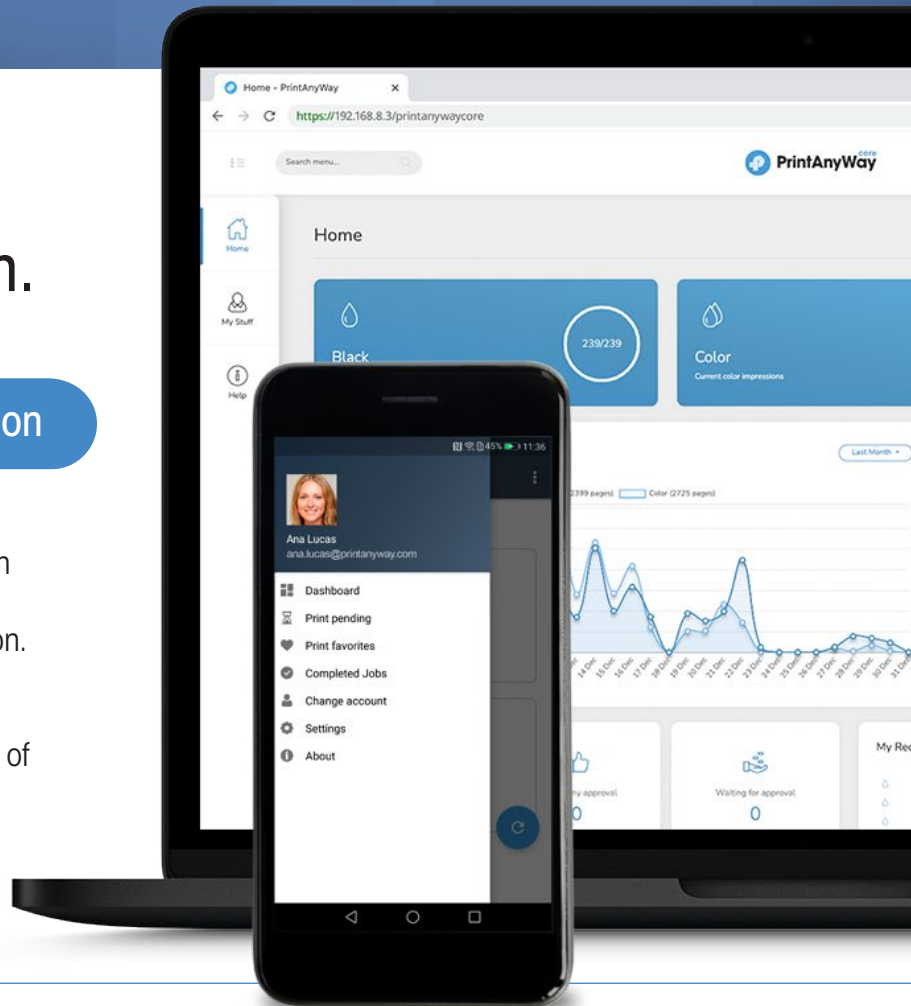

## The complete print management solution.

### it's time to make the right decision

Take control of your organization's costs with the simplest, most flexible and complete 100% web based print management solution.

With **PrintAnyWay** you can manage who prints, when and how, ensuring the security of your documents and increasing the productivity of your users.

---

**AUTHENTICATION**
PINs, network credentials or RFID cards are some of the options available.

**AUTHORIZATION**
By user profile, group, printer, function, and usage quota.

**ACCOUNTING**
By function, user, group, cost center, printer, color, BW, duplex, paper, and cost.

**WORKFLOWS**
Rules and printing workflows based on the number of pages, color, duplex, etc.

**SECURE PRINT**
FollowUser allows secure printing to a printer selected by the user.

**MOBILE PRINTING**
Print via email or directly via iOS™ and Android™ mobile devices.

# PrintAnyWay

- ✓ The simplest, most intuitive and complete print management solution.

- ✓ Easy to set up and fully configurable to the reality of each organization.

- ✓ Streamlines the implementation of sustainable printing policies.

- ✓ Advanced analysis features.

- ✓ 100% web based management for directors, administrators and users.

- ✓ Easily scalable system that grows with the organization.

change the way you print

# Authentication, Authorization & Accounting

### AUTHENTICATION

Integrated authentication management on Multifunction Printers and web portal are a basic part of the **PrintAnyWay** solution.
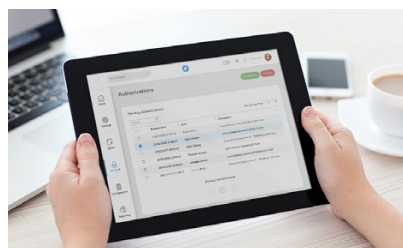

Secure authentication on MFPs can be done by PIN, Active Directory or compatible RFID cards. In addition to simple user authentication, with **PrintAnyWay** you can also define exactly which multifunction devices each user has access to.

This solution also allows you to automatically synchronize users with multiple Active Directory or LDAP servers.

### AUTHORIZATION

Set BW and color quotas, limits by value or balance. Quotas can be set to restart at the beginning of a period (for example, the beginning of each month).
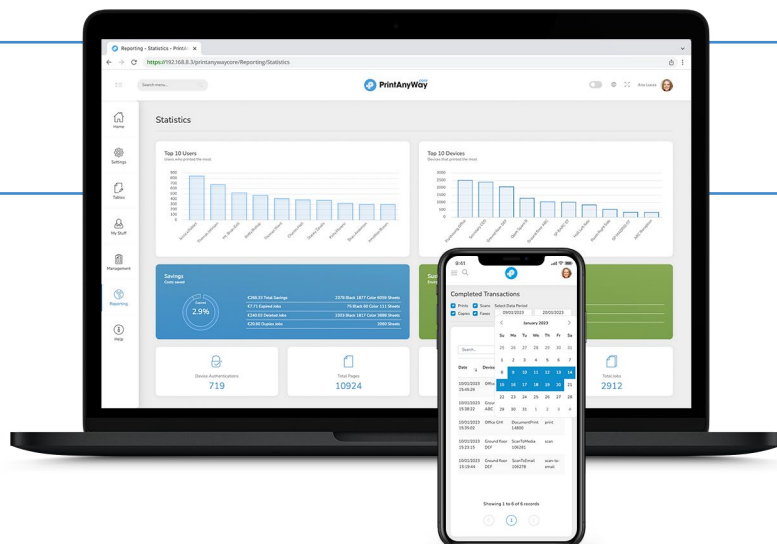

### ACCOUNTING

Total accounting of Prints, Copies, Faxes, and Scans. Detailed activity information per user, department, cost center, printer, color, paper size, duplex and cost.

# PrintAnyWay Core

A fully responsive web portal, loaded with features for both administrators and users.

## QUOTA AND BALANCE MANAGEMENT
All quota and balance management can be carried out online. Users can request temporary increases of their quotas which later follow an approval workflow. Management can also carry out balance chargements through an available POS screen.

## PRINTING WORKFLOWS
Define rules for print job redirection for users and groups based on the attributes of the job itself as well as other factors.

## QUERIES AND STATISTICS
Each user can query their past prints, balances and quotas. Administrators in turn have access to a more comprehensive view, with the possibility of generating statistical reports and charts.

## BILLING CODES
With PrintAnyWay it is possible to assign print costs to Billing Codes, which allows accounting and cost limit per projects, processes or departments.

## USER SYNCHRONIZATION
Easily import Microsoft Azure AD and Google Workspace users.

## SERVERLESS PRINTING
Users print directly from their computer to a local printer without the need for a print server. Serverless printing eliminates the cost of provisioning and maintaining physical print servers, while still providing advanced features such as usage accounting, printing quotas and secure release of print jobs.

## CUSTOMIZABLE ACCESS
You can create different profiles to determine which options and features each user has access to.

## GUEST PRINTING
PrintAnyWay allows a manager or administrator to easily add a guest user account with an expiration date. All guest usage is then reported and it is also possible to assign quotas.
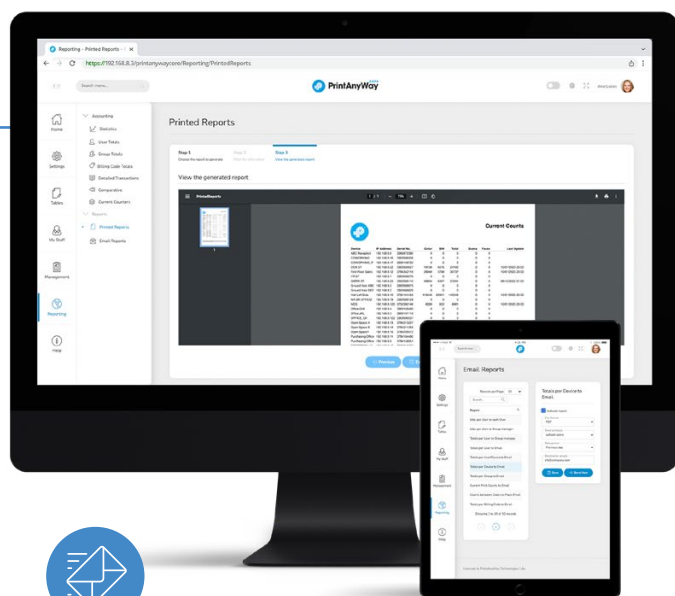

## PRINT JOB USER DELEGATION
With PrintAnyWay, users are now able to delegate any print job in a FollowUser queue for another user to print.

## WEB SERVICES
Designed for integration with third-party systems, it allows you to add users, upload balances, and query transactions.

# Reports

Comprehensive set of reports with summary or detailed information, by user, group, cost center, printer are available in the PrintAnyWay solution.

*dark mode available

Automatically sends various types of reports by email to administrators, department directors or users in Excel, Word and PDF formats.

## ACCOUNTING
Extensive set of accounting reports related to all aprinting and scanning activities.

## HISTORY
History of all sessions opened in the MFPs by users.

## TABLES
Possibility of generating listings of all tables, such as users, devices, price tables, etc.

## COUNTERS
Current and past counters of total prints, scans, and faxes sent per device.

# FollowUser Technology

FollowUser allows for secure printing to any MFP selected by the user, changing print options on the fly, like forcing black and white, double-sided or even choosing the number of copies.

Unclaimed prints or confidential documents next to devices cease to exist, with a direct reduction in costs.

In case of unavailability of a specific printer, the user can release the job on the nearest device without having to reprint, thus providing greater mobility and productivity gains.

The FollowUser option also permits users to select certain documents as favorites (such as forms and brochures), allowing them to be reprinted whenever necessary.

# Savings and Sustainability

- **Lower Carbon Emissions**
- **Fewer Trees Cut**
- **Less Water Spent**

**SAVINGS**
PrintAnyWay saves printing costs up to 30%. Whether it is by letting users know their prints are being tracked, by imposing print limits, implementing supervisor authorization, enforcing double-sided printing, routing bulky prints to more economic devices or simply by avoiding printing mistakes, PrintAnyWay can drastically reduce paper and toner spending.
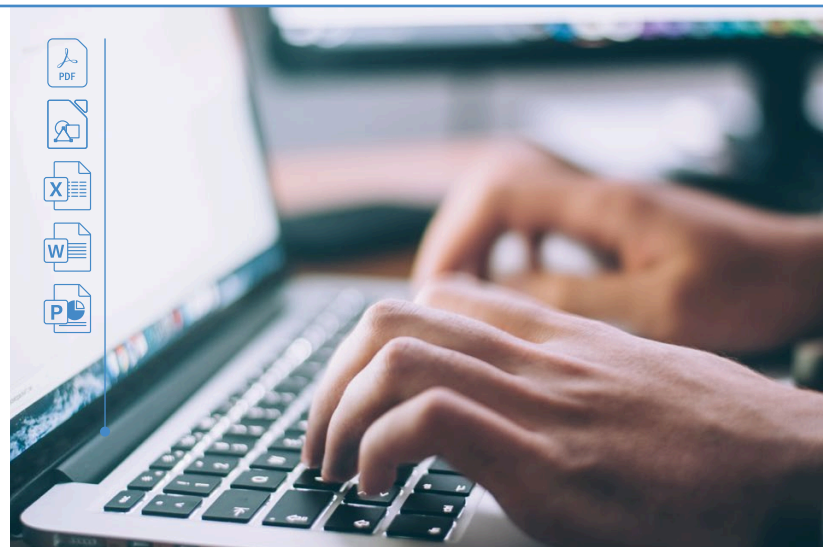

**SUSTAINABILITY**
At the core of our print management approach, lies a set of processes that bring about concrete and measurable environmental benefits, which translate into lower greenhouse gas emissions, more trees saved and less wastewater produced.
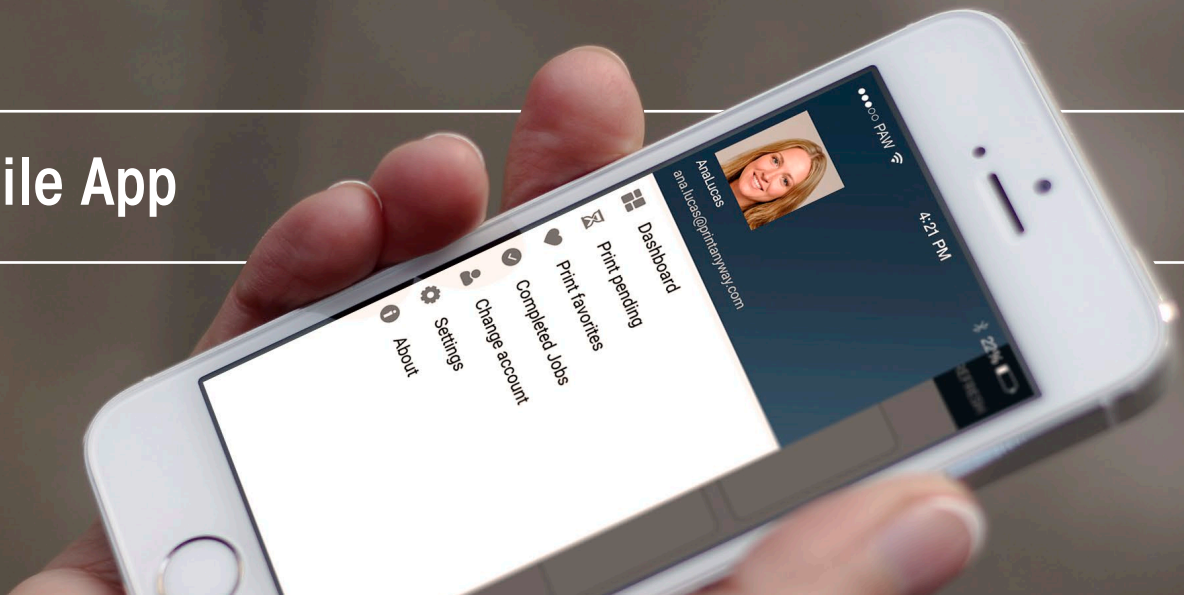

# Email Printing and File Upload

We have recently enhanced our Email Printing and File Upload features by adding support for Microsoft Office documents from popular applications like Word, Excel and PowerPoint.

This way the solution allows a greater user and printing mobility, without the need to install drivers and printers.
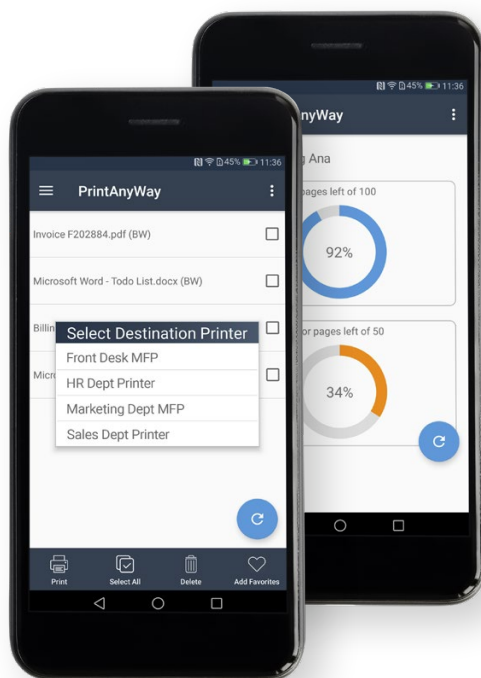

Prints performed using this method are subject to the same rules of authentication, authorization and accounting as the rest, which translates into a truly integrated solution.

# Mobile App

This app provides **PrintAnyWay** users an additional interface to manage their secure printing in MFPs while enabling the same capabilities in more limited printers.

## Features

### NFC
MFP user authentication in smartphones with NFC.

### FOLLOWUSER
Secure release of print jobs on the MFP selected by you.

### FAVORITES
Manage, print or reprint favorite documents.

### STANDARD PRINTERS
Enable secure printing in standard TCP/IP printers without UI.

### ACCOUNTING
View BW and color quotas, current balance or print counts for the current month.

### COMPLETED JOBS LIST
Users can verify their print history, check final job status, printing date and time, as well as the number of pages printed.
